Comments

(Set forth by above question #, if applicable.
Use "Additional Comments" Sheet, if needed)

File #: 95-251947

#1: With microscopic hair comparison, one cannot determine from the notes that the examination was conducted in an appropriate manner.

#2: Documentation is poor. The notes are not dated or initialed and are in pencil instead of ink. Abbreviations are used that are difficult to interpret. Some of the hair recovered from the Q items are marked as "NSFC".

Presumably, this means "Not Suitable for Comparison", but there is no documentation as to why these hair are unsuitable. The technicians do not document the recovery of hair from any of the Q items as stated in the report.

From the documentation, it cannot be determined if the examiner looked at items Q18-Q21, yet he reports that no Caucasian hair was found in these items.
